

The Dental cosmos Volume 38

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 Excerpt: ... in the ratio of thirty-four degrees to the minute. I then proceed with thymol or cassia, preferring the former for the anterior teeth, and apply the current again and again until every particle of oil is absorbed by the tooth. When applying the current to the oil you will observe minute electrical sparks flying in all directions; the heat alone should be sufficient to destroy microbes, bacteria, or any other kind of germs present. I then fill the upper or apical part of the root with the following preparation, in the form of a paste composed of alum, thymol, glycerol, oxid zinc. Placing a small piece on an old broach with barbs removed, I work it up, not being over-particular how far; then take a small piece of heated gutta-percha, force it into the canal, which drives the preparation ahead, thoroughly filling the canal and sealing it better than any other preparation with which I am familiar, not excepting chloro-percha, oxyphosphate, wax, paraffin, etc. For teeth and roots containing putrescent pulps, with no external opening or abscess, I use the same treatment, discarding, however, the creasote or carbolic acid, and proceeding with sulfuric acid, oils, and electric wire. This method I have adopted in all cases, have used it in all conditions and stages of inflammation and ulceration, in acute and chronic cases. I have treated and filled root and tooth immediately, where a slight periosteal inflammation and swelling of the face still existed. In one case the tooth was so sore to the touch that it was impossible to use the mallet, yet I filled the root as described, and the tooth with gold, by hand-pressure; and to the great satisfaction of both myself and my patient the swelling and pain subsided after twenty-four hours,

and to this day the tooth is doi...
