

# Compressible Flow

-Begins with basic definitions and formulae.-Separate chapters on adiabatic flow, isentropic flow and rate equations. -Includes basics of the atmosphere, and measuring techniques. -Separate sections on wind tunnels, laser techniques, hot wires, flow measurement and gas dynamics laboratory. -Discusses applications in aircraft and rocket propulsion, space flights and pumping of natural gas. -Contains large number of solved and unsolved problems. ABOUT THE BOOK: The subject of compressible flow or gas dynamics deals with the thermo-fluid dynamic problems of gases and vapours, hence it is now an important part of both undergraduate and postgraduate curricula. Compressible Flow covers this subject in fourteen well organised chapters in a lucid style. A large mass of theoretical material and equations has been supported by a number of figures and graphical depictions. Moreover, the revised edition has an additional chapter on miscellaneous problems in compressible flow (gas dynamics) which has been designed to support the tutorials, practice exercises and examinations. Problems have been specially chosen for students and engineers in the areas of aerospace, chemical, gas and mechanical engineering. Also the authors broad teaching experience is reflected in the clarity, and systematic and logical presentation of the book. CONTENTS: -Definitions and Basic Relations-The Energy Equation-Rate Equations for a Control Volume-Isentropic Flow with Variable Area-Wave Motion-Flow with Normal Shock Waves-Flow with Oblique Shock Waves-Flow in Constant Area Ducts with Friction-Flow in Constant Area Ducts with Heat Transfer-Multi-dimensional Flow-Methods of Measurement-Aircraft Propulsion-Rocket Propulsion-Miscellaneous Problems in Compressible Flow READERSHIP: -UG/PG students and teachers of

aerospace, chemical and mechanical engineering -University and college libraries-Researchers and professionals of engineering -Research labs/industries.Also available:Analysis & Design of Control Systems using MATLAB - ISBN 1906574197Turbulent Flow - ISBN 1906574316
