

# Handbook of Biologically Active Phytochemicals & Their Activities

CRC Handbook of Biologically Active Phytochemicals and Their Activities presents an alphabetical catalog of some 3,000 biologically active phytochemicals (elements and compounds) from higher plants. The data includes at least one and in some cases as many as 25 biological activities for each phytochemical. The book's tables also provide data on effective dose, inhibitory concentrations, and lethal and/or toxic doses. Entries after 1990 indicate the source of the data. CRC Handbook of Biologically Active Phytochemicals and Their Activities makes it possible for the first time to locate the concentration of many compounds in plants and compare this data with dosage information to calculate how much of a given plant food it would take to cause lethality, antioxidant activity, hypoglycemic activity, or artemicidal activity. These handy tables of hard-to-find information make this book an indispensable resource for pharmacologists, toxicologists, nutritionists, pharmacognocists, and food scientists.
