

Trends in Drug Research (Pharmacochemistry Library)

This volume comprises details of the recent advances in current drug research, covering such fields as: trends in methodologies; the search for new chemical classes; the role of free radicals; taxol and melatonin agonists; and, the relatively new subdiscipline, teaching medicinal chemistry. The volume will be of great value to pharmacologists, pharmacists and medicinal chemists, and may help to show society that in the nineties the perspectives for more effective drugs seem better than ever before.
