

Veterinary Laboratory Medicine: Clinical Biochemistry and Haematology

This textbook covers all aspects of basic clinical biochemistry and haematology, and includes test-by-test interpretation of laboratory results and sampling techniques. Information on the selection and use of an external laboratory is provided, as well as the establishment of the practice laboratory. Also included are detailed instructions for all the commonly required tests. This reference should be of interest to practitioners who require a guide to laboratory work, and to veterinary students studying laboratory medicine and clinical pathology.
