

The Rhododendron Species: Elepidote Species - Series Arboreum-lacteam v. 2

This book covers series arboreum, argyrophyllum, auriculatum, barbatum, campanulatum, falconeri, fortunei, fulgens, fulvum, grande, griersonianum, irroratum and lacteam. The core of the book is a list of elepidote rhododendrons in their series, a key to the series and subseries, and full descriptions of each species. The keys provided in the book should make it possible for any grower, professional or amateur, to identify with reasonable accuracy every species in cultivation. Also of importance is Davidian's synopsis of elepidote rhododendron species and some of their characteristics, along with new taxa.
