

Total Nutrition - Feeding Animals for Health and Growth

Following the success of Nutricines, the author considers the practical implications and implementation of the theories laid out therein. The strategic use of a wide variety of disease avoidance and health maintenance measures will contribute to an improved and more acceptable system of animal production without the use of antibiotic growth promoters. Contents
Problems of perception: animal production, food safety and public health
Virtues of cleanliness: feed quality and hygiene
Eating to live: voluntary feed intake
Raw material processing: digestion and absorption of nutrients
Struggle for supremacy: management of the gastrointestinal tract
External enemies: immune system and defence in a dangerous world
The enemy within: non-infectious diseases and oxidative stress
Monitoring performance: assessment of total nutrition and feeding standards
Difficult demands: safe food, low cost, ethical issues, environmental impact
