

Fine Needle Aspiration Biopsy of the Pancreas

Written for clinicians, pathologists, trainees and cytotechnologists interested in fine needle aspiration, this book provides a complete overview of the diseases that may be encountered in pancreatic fine needle aspiration biopsy (FNAB). This includes coverage of pertinent clinical, radiological, gross, and histopathological features. The main focus is on the cytopathologic criteria and differential diagnoses of various benign and malignant entities. Emphasis is also placed on pitfalls and problem areas, and discussion includes ways to avoid them when possible. A unique feature is the inclusion of recent advances in the diagnosis of pancreatic diseases, including criteria for the diagnosis of pancreatic adenocarcinoma, pancreatic cyst fluid analysis, and endoscopic ultrasound-guided FNAB.
